

Bellwork

04/26/12

1. Find a side length and the apothem of a *heptagon* when given a radius of 11 in.

$$\cos 25.71 = \frac{a}{11}$$

$$a = 11 \cdot \cos 25.71$$

$$a = 9.91$$

$$\sin 25.71 = \frac{s}{11}$$

$$s = 11 \cdot \sin 25.71$$

$$s = 4.77$$

$$S = 9.54$$

Geometry
11.6b Areas of Regular Polygons
Standard(s): 2, 4

Vocabulary:

Center of a Polygon: The center of the circumscribed circle.

Radius of a Polygon: Radius of the circumscribed circle.

Apothem of a Polygon: The distance from the center to any side of the polygon.

Central Angle of a Regular Polygon: An angle formed by two radii drawn to consecutive vertices of the polygon.

THEOREM*For Your Notebook***THEOREM 11.11 Area of a Regular Polygon**

The area of a regular n -gon with side length s is one half the product of the apothem a and the perimeter P ,

so $A = \frac{1}{2}aP$, or $A = \frac{1}{2}a \cdot ns$.

$$A = \frac{1}{2} a P$$

Perimeter

1. apothem?

2. Side length?

Find the Area

Find the perimeter and the area of the polygon. Round to the nearest tenth, if necessary.

$a = 6.5$

$$8^2 = s^2 + 6.5^2$$

$$s = 4.66$$

$$s = 9.33$$

$P = 46.64$

$$A = \frac{1}{2}(6.5)(46.64)$$

$A = 151.57 \text{ un}^2$

$$\frac{360}{3} = \frac{120}{2} = 60^\circ$$

$$\tan 60 = \frac{s}{5} \quad a = 5$$

$$s = 5 \cdot \tan 60$$

$$s = 8.66$$

$$s = 17.32$$

$P = 51.96$

$$A = \frac{1}{2}(5)(51.96)$$

$A = 129.90 \text{ un}^2$

$P = 7 \cdot 10 = 70$

$$\frac{360}{10} = \frac{36}{2} = 18^\circ$$

$$\tan 18 = \frac{3.5}{a}$$

$$a = \frac{3.5}{\tan 18}$$

$a = 10.77$

$$A = \frac{1}{2}(10.77)(70)$$

$A = 377.02 \text{ un}^2$

Area of Shaded Regions

Find the area of the shaded region.

$$P = 12 \cdot 8 = 96 \text{ cm}$$

$$\tan 22.5 = \frac{6}{a}$$

$$a = \frac{6}{\tan 22.5}$$

$$a = 14.49 \text{ cm}$$

$$A = \frac{1}{2}(14.49)(96)$$

$$A = 695.29 \text{ cm}^2$$

$$A = r^2 \pi$$

$$\sin 22.5 = \frac{6}{r}$$

$$r = \frac{6}{\sin 22.5}$$

$$r = 15.68$$

$$A = (15.68)^2 \pi$$

$$A = 772.28 \text{ cm}^2$$

$$772.28 - 695.29$$

$$A = 76.99 \text{ cm}^2$$
